

Pathogenesis and Transmission of SARS-CoV-2

Kyle Cordeiro, Karol Derech, Cailyn Eley, Shahithra Kirubalingam, Abigail Oladesu

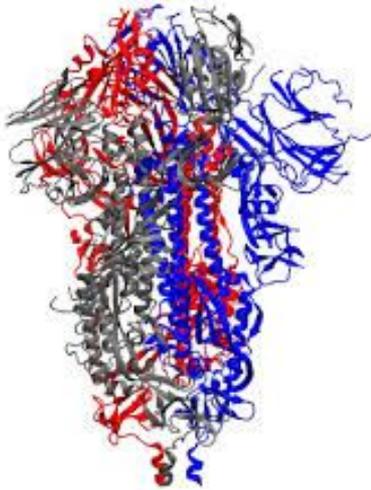

SARS-CoV-2

Characteristics

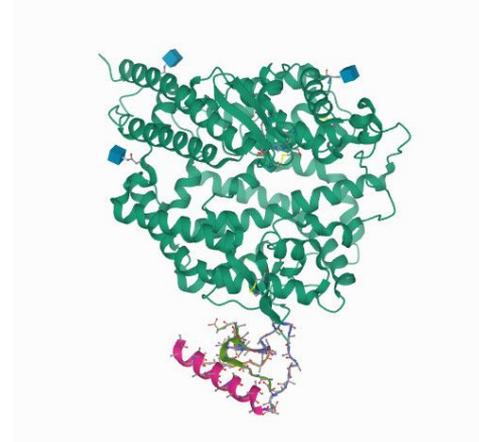

- Betacoronavirus
- Zoonotic
- Made of structural & non-structural proteins

SARS-CoV-2 Spike Protein

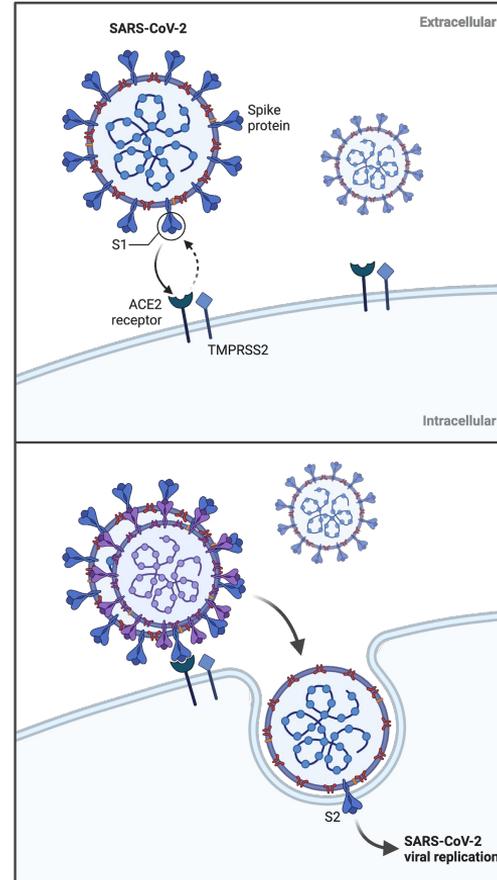

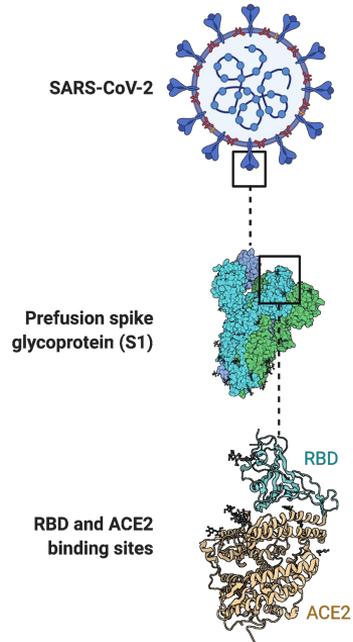

- N-terminal S1 domain binding subunit
- T-terminal S2 membrane fusion subunit
- Trimer of S1/S2 subunits
- Cleavage by ACE2 causes conformational change

Angiotensin Converting Enzyme 2 (ACE2)

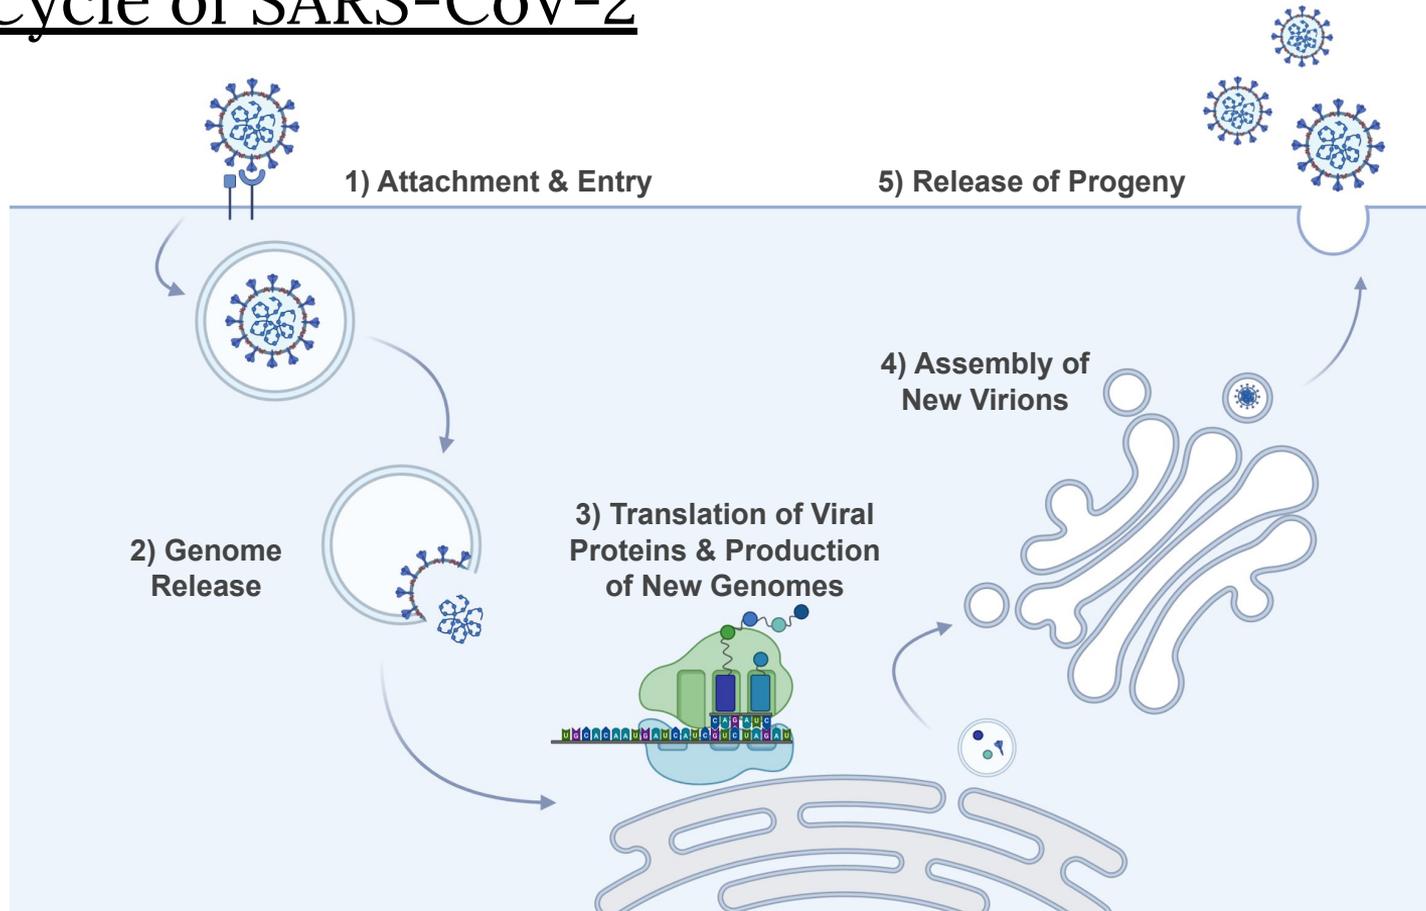

- Functional receptor of SARS-CoV-2
- Found on epithelial of lung and small intestine
- Functions as RAS attenuator
 - Cleaves one AA from angiotensin II
- **Required for SARS-CoV-2 entry**

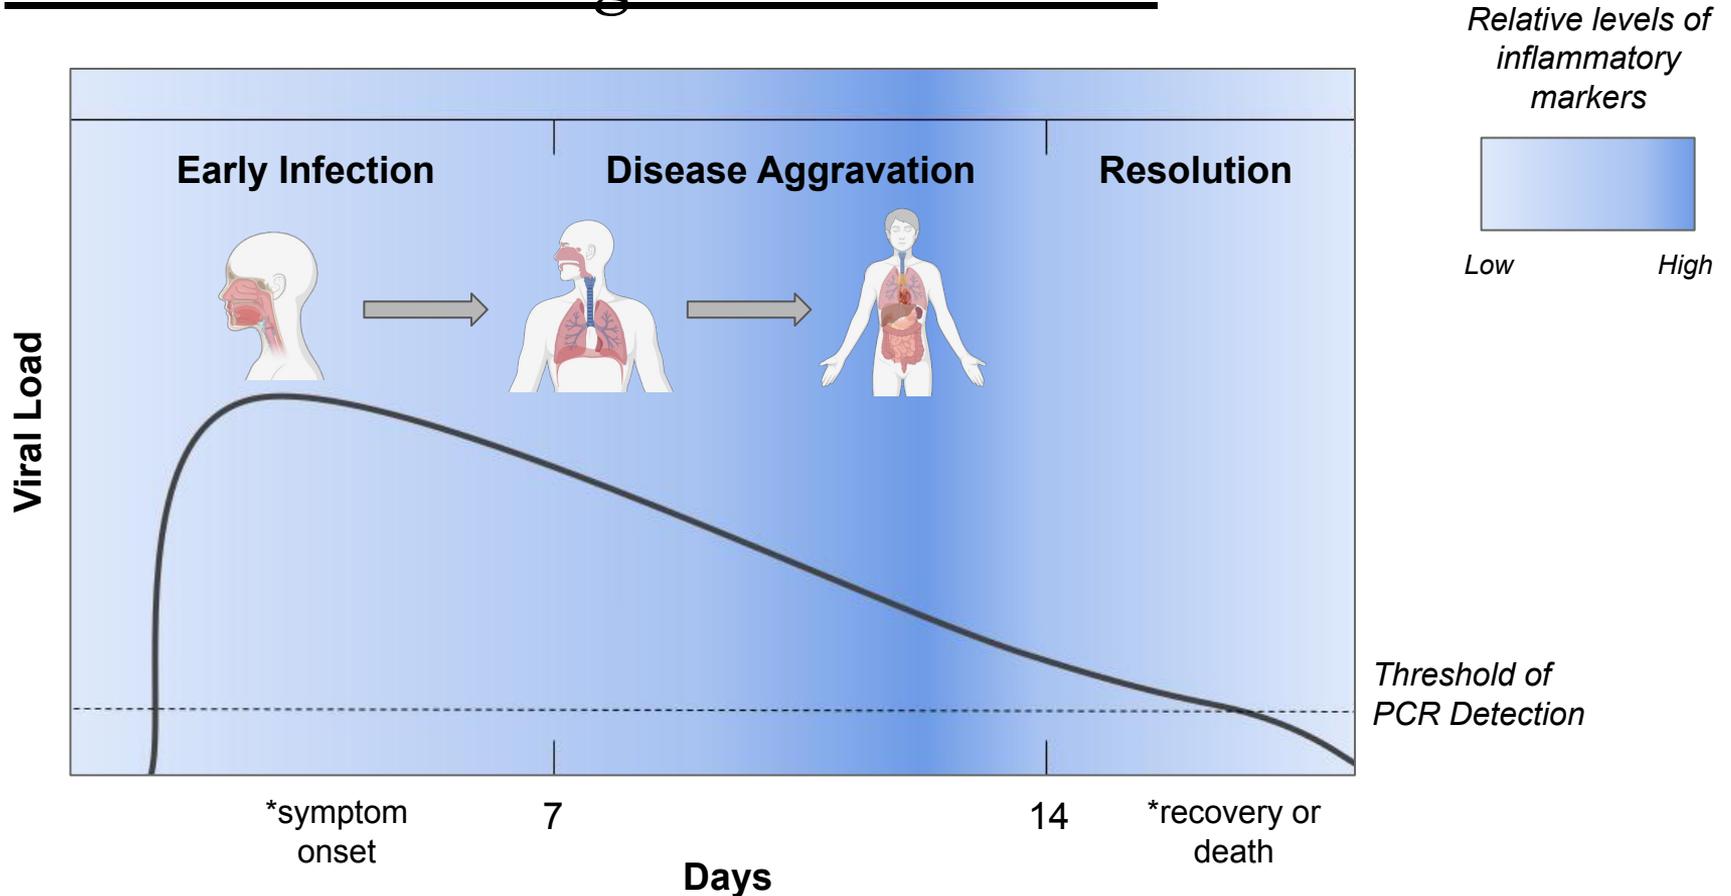

Lock and Key Mechanism

Life Cycle of SARS-CoV-2

SARS-CoV-2 Pathogenesis: Overview

Progression of COVID-19: Early Infection

DAYS 0-7

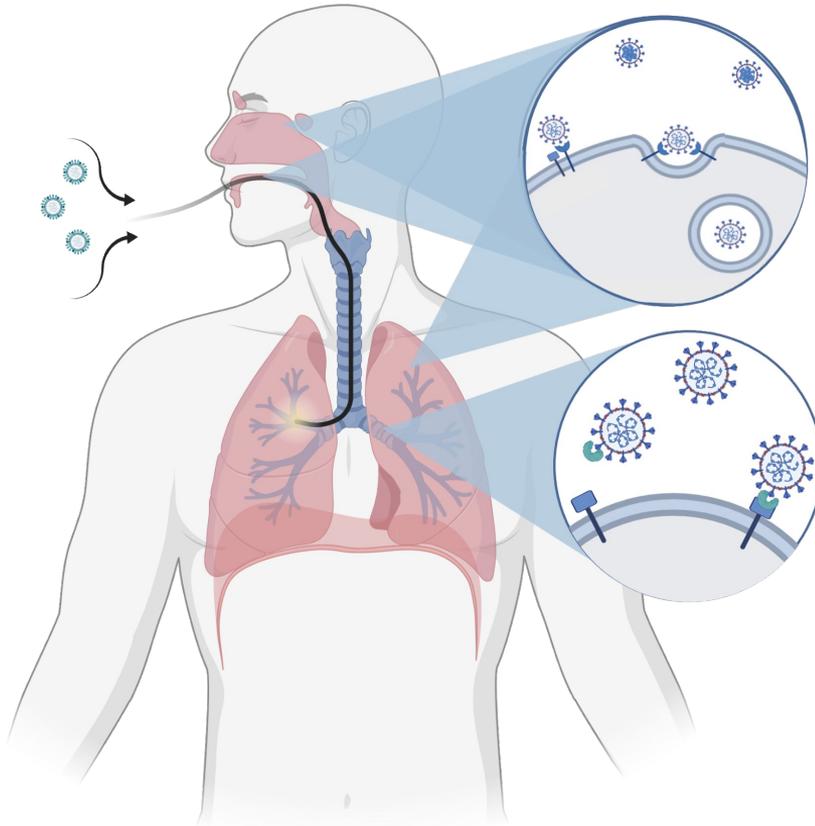

First Cells Attacked

- Oral and Nasal
- Alveolar
- Bronchial

Onset of Symptoms (5-7 days)

- Loss of Taste and Smell
- Cough
- “Flu-like”

Progression of COVID-19: Disease Aggravation

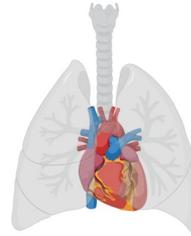

DAYS 7-14

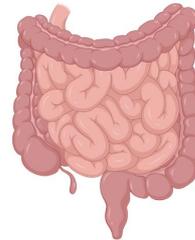

Viremia

SARS-CoV-2 enters
the circulation

Cardiac & Pulmonary

- Myocardial injury
- Hypoxemia
- Lung infiltrates

Gastrointestinal

- Nausea
- Anorexia

Renal

- Kidney injury
- Proteinuria

Progression of COVID-19: Resolution

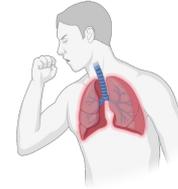

DAYS 14+

	Recover	Succumb
Inflammation	↓	↑
Tissue Repair	↑	↓

Potentially Fatal Complications

Cardiac Arrest

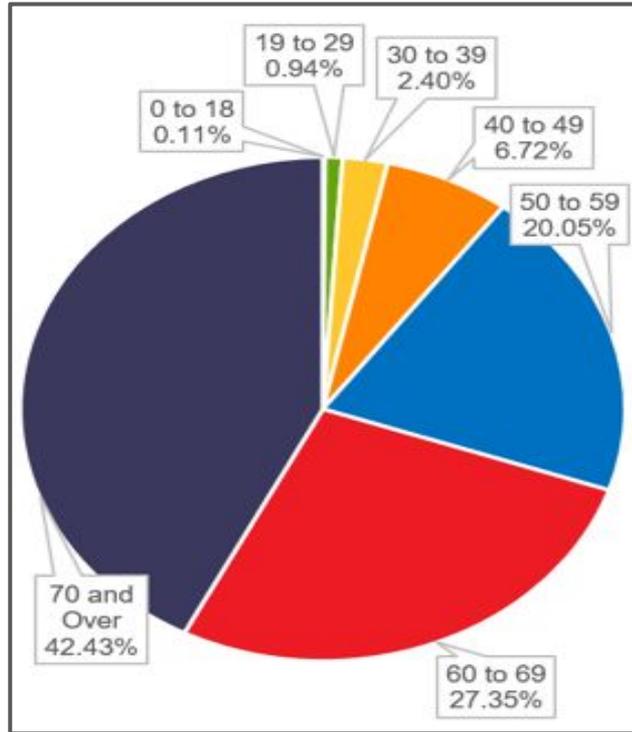

Acute Respiratory Distress Syndrome (ARDS)

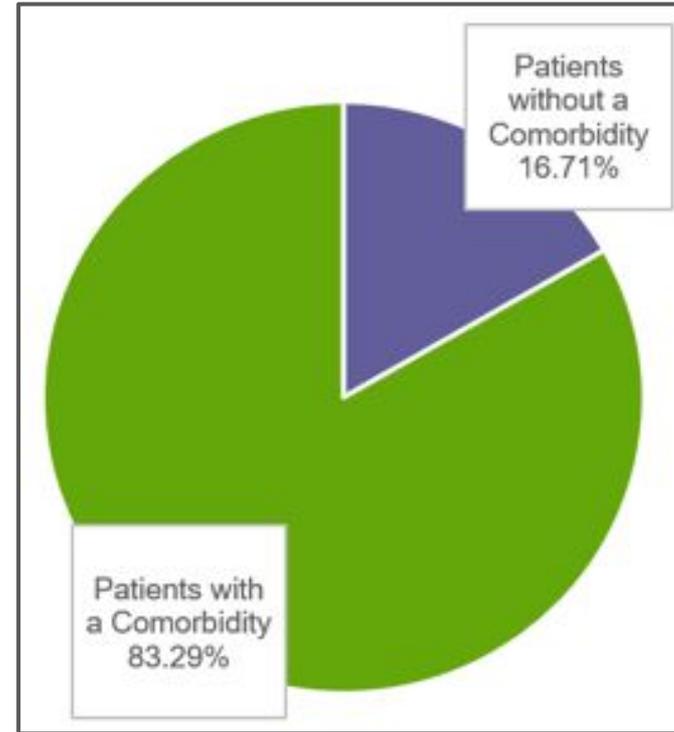

Multiple-Organ Failure

What Factors Contribute to a Fatal Outcome?

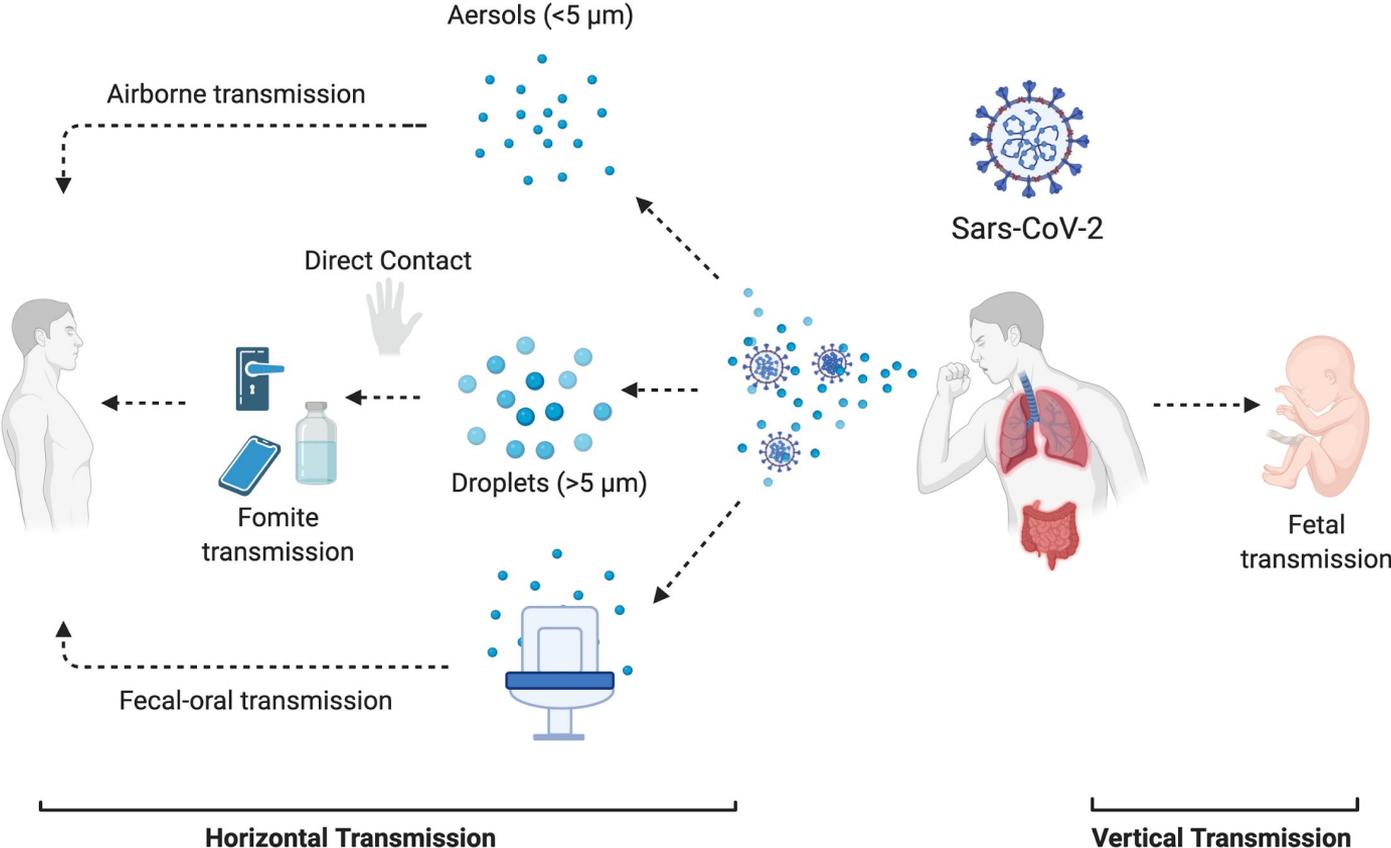

COVID-19 Death Toll by Age

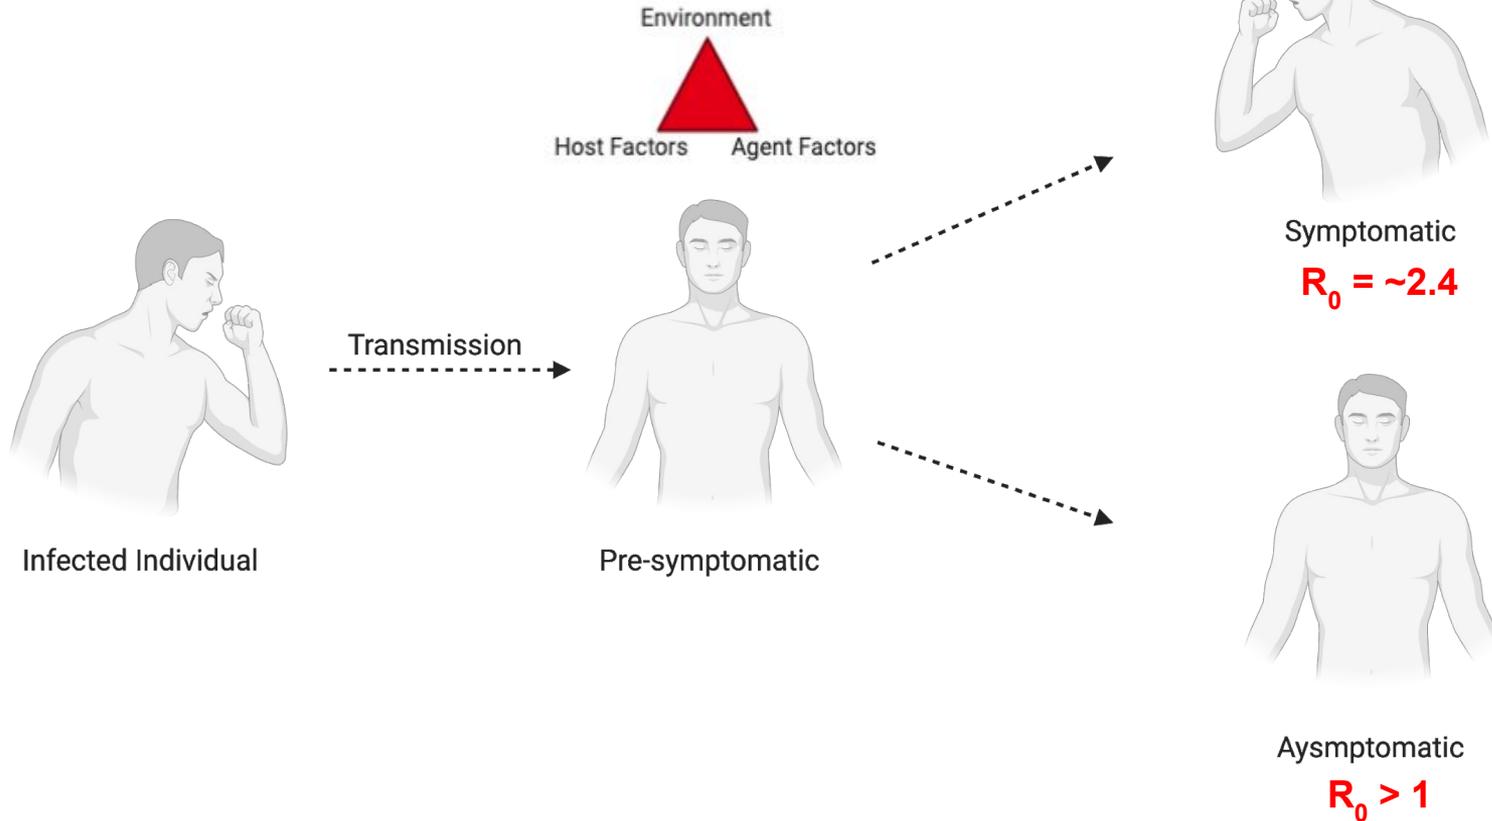

COVID-19 Deaths by Comorbidity Presence

Modes of Transmission

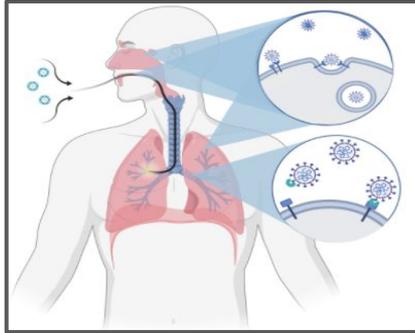

Transmission Dynamics

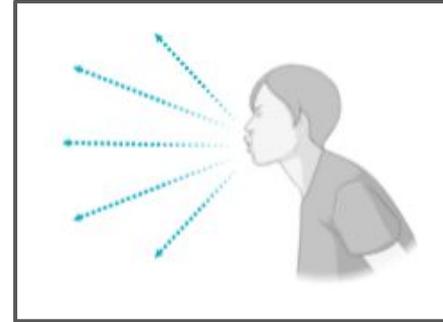

Challenges and Future Implications

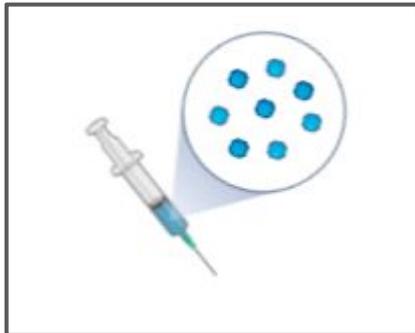

Discovering Viral Mechanism of Pathogenesis

Understanding Transmission Dynamics

Identifying Therapeutic Targets

Testing Preventative Measures

Transgenic hACE2 Mouse Model

Cell

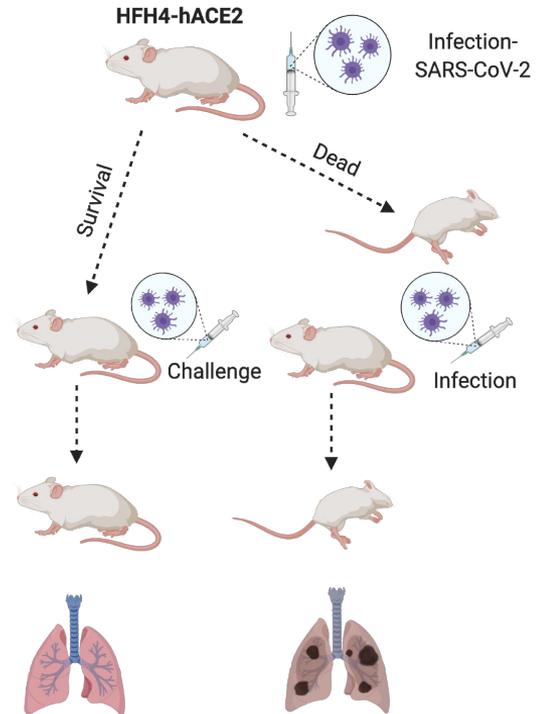

Volume 182, Issue 1, 9 July 2020, Pages 50-58.e8

Article

Pathogenesis of SARS-CoV-2 in Transgenic Mice Expressing Human Angiotensin-Converting Enzyme 2
